# Telomere Testing

Account Number: 204793	Patient:	Bill Roberts	Accession Number: L09592
Consumer Client	Gender:	M	Requisition Number: 528704
10401 Town Park Drive	DOB:	9/9/9999	Date Received: 4/20/2012
Houston, TX 77072 USA			Date Reported: 5/30/2012

Telomere Test Results

Patient Telomere Score: 9.64

Percentile relative to patient age and population: 84%

The Patient Telomere Score is a calculation of the patient telomere length derived from nucleated white blood cells obtained from whole blood. This result is graphed relative to the average telomere length of a sample population in the same age range. The higher the telomere score, the "younger" the cells.

A Patient Telomere Score that is above the black line (green box) is an above average Telomere score.

A Patient Telomere Score that is below the black line (red box) is a below average Telomere score.

If patient age was not provided, a horizontal red/green line will be shown which represents the patient Telomere score across all age groups.

J.F. Crawford, Ph.D., Laboratory Director
